

THE CHALLENGE

Smart Electric Power Alliance had a vision of developing an advanced target marketing strategy. Unfortunately, over 60% of the contacts in their CRM system were missing key job titles and functions, making it impossible to segment audiences for their campaigns. John Van Zalk, Membership Data Associate at Smart Electric Power Alliance, realized that their current data provider could not support their visions of a new sales and marketing strategy. Leadership at the organization recognized a one-time data cleanse was not the solution. Instead, the company would have to adopt an ongoing data cleansing strategy.

During the vendor evaluation process, ZoomInfo ran a complimentary database analysis on Smart Electric Power Alliance's legacy database. "Understanding the account and contact coverage of each vendor was extremely important, as we wanted to make sure they would be able to support us with up-to-date information for the accounts we were targeting," explained John Van Zalk, Membership Data Associate at Smart Electric Power Alliance.

"When compared to our previous data provider, ZoomInfo matched to twice as many contacts in our CRM. This gave us complete confidence in moving forward with ZoomInfo, as a data provider's ability to update and append information is directly tied to whether or not they have that account or contact in their own system."

Success driven by ZoomInfo Enrich...

86%

Of contacts now have job titles and functions

2x

Database match rate was 2x greater than that of the competing vendor

2,000

Contacts from Smart Electric Power Alliance's CRM were moved to the correct account

THE CUSTOMER

Smart Electric Power Alliance is a non-profit organization dedicated to working with electric power stakeholders through the most pressing issues affecting the growth and utilization of smart energy.

Industry: Non-profit

THE SOLUTION

With ZoomInfo Enrich, Smart Electric Power Alliance affixed job titles and functions onto 40% of their contacts. The additional data was an integral piece for their company's marketing success. "With ZoomInfo Enrich, 86% of the contacts in our database now have job titles and functions, allowing us to segment our audience and execute highly targeted marketing campaigns," said van Zalk.

Additionally, Smart Electric Power Alliance uses ZoomInfo to append data onto self-registered leads in their CRM. "With ZoomInfo Enrich, we were able to append necessary data onto self-registered leads in our database. So far we've moved over 2,000 contacts to their correct accounts. And as a result, we reached our goal for increasing the number of contacts within member organizations, six months ahead of time."

THE RESULTS

To ensure campaign success, Smart Electric Power Alliance uses Enrich's quality metrics to denote higher quality leads. The quality metrics field allows Smart Electric Power Alliance to understand data quality on each person within their CRM. Moreover, the tool enables them to remove contacts from a campaign that negatively impact bounce rates. "Ongoing data hygiene is extremely important to us. If we're marketing our products to lost contacts, our conversion rates are greatly affected, making

"When compared to our previous data provider, ZoomInfo matched to twice as many contacts in our CRM. it difficult to assess the success of our campaigns. Additionally, we need to make sure we are able to accurately assess the available audience for a specific product to make sure it has potential," explained van Zalk.

Lastly, Smart Electric Power Alliance was continuously impressed with ZoomInfo's support while implementing Enrich. The team's support eased the product application process for the company. "The support of ZoomInfo's team has been awesome. When implementing the tool, there was always someone willing to jump on the phone with me and work out any questions we had. No matter the issue, they were always able to figure it out," said van Zalk.
